# Dankwoord

(Acknowledgements)

The PhD research presented here was performed at the Department of Business & ICT of the Faculty of Economics & Business at the University of Groningen, the Netherlands. I express my gratitude to all people who supported me during the research project. There are several people that I would like to thank in particular.

First and foremost, I offer my gratitude to my supervisors prof. dr. ir. Hans Wortmann and dr. Nick Szirbik. They motivated and helped me to apply for a PhD position in the first place. Nick, I am grateful for the opportunity to build on your research and the freedom you gave me to develop my own ideas. I also appreciate very much your easy accessibility and availability throughout the research project. Hans, without your guidance and support this research and the casework would not have been possible. You always made time to provide comments and coaching despite your busy schedule. I thank both of you for your advice and insights, and of course for your help in writing and reviewing the papers that make up the core of this thesis. On the same lines, I would like to thank the other members of the reading committee, prof. dr. G. Wagner, prof. dr. ir. A. Verbraeck, and prof. dr. ir. C.T.B. Ahaus for assessing the quality of this dissertation and approving the manuscript.

Secondly, I would like to thank all (former) colleagues from the Department of Business & ICT. Several colleagues deserve special mention. These are the fellow (ex-)members of The Agent Lab: Gerben Meyer, Gijs Roest, Wilrik Mook, Bert-Jan Broeksema, and Bas Dijkstra. Gerben, despite our different research topics, we wrote an interesting paper together that constitutes Chapter 3 of this dissertation. Gijs, Wilrik and Bert-Jan, thank you for your essential technical expertise on programming the software tools that are part of this research. The same thank you goes to Bas, who worked with me as a student-assistant, and completed both his bachelor and master thesis under my supervision. Furthermore, I would like to thank Alex Alblas, Nick van Beest, and Javid Koochaki for being my (former) office mates and for several fruitful discussions. Finally, I would like to express my gratitude to the secretaries for their support. They include from the department Durkje van Lingen-Elzinga, Irene Ravenhorst and Iris Huizinga, and from the SOM research school Ellen Nienhuis.

Case studies of real-life business processes are an essential part of this research. I am grateful to all involved employees from the three case organizations. I want to

thank all interviewees for their availability and knowledge sharing. From the University Medical Center Groningen, I am grateful in particular to Prof. Jan Roodenburg and Rachel Dopheide. Jan, thank you for your broad (scientific) interest, for building internal commitment for my research, and for your contribution to our paper in Chapter 6. Rachel, thank for your assistance on providing organizational documentation and organizing the data collection process. From the municipality of Oldambt, I am grateful in particular to Irmgard Buissink for her guidance, support, and input during the conception and execution of my casework there. From the N.V. Nederlandse Gasunie, I thank Peter Baard for his support, interest and enthusiasm, and for building internal support for my research.

A special thank you goes to my mother and sister. Even though we live quite close to each other, we did not see each other as often as I would have liked to. Thank you for understanding this and for always being there. Mom, I have the deepest respect for the fact that you did such a good job in raising Petra and me alone. I cannot wish for a better mother. I also thank my family in law for their kindness and hospitality.

My final words go to my wife Nadine. We joked several times about what I would write about you in the acknowledgements of my dissertation. Clearly, there are not enough words to express my gratitude for your unconditional support and love throughout all the phases of this journey, and for putting up with my grumpy behaviour on many occasions. I love you and look forward to spending the rest of my life with you. I dedicate this dissertation to you!

Marco Stuit
